

## **Environmental Management Policy**

Universal Electronics Inc. (UEI) and its subsidiaries place great importance on ensuring that its products comply with all applicable environmental laws and regulations, as well as customer-specific requirements. This is done by requiring our supply chain to provide parts that meet the final product's environmental requirements. UEI validates the integrity of suppliers' representations and parts prior to and during manufacturing. UEI also utilizes manufacturing and quality control techniques to ensure that the necessary standards are achieved and maintained throughout the manufacturing process.

UEI is committed to green management activities to reduce adverse environmental impacts and to help make the world a cleaner place. These activities include finding ways to extend the useful life of our products, reducing energy consumption, reducing greenhouse gas emissions, restricting hazardous substances, developing refurbishment programs, and encouraging reuse and recycling of waste.

For questions regarding the environmental management policy or copies of any of our factories' ISO-14001 certifications, please contact your customer service representative.
